

Rocky Mountain Aircraft's support for the British Antarctic Survey ends another successful summer flying season on the white continent.

Rocky Mountain Aircraft of Calgary, Alberta are pleased to report another great season in their ongoing support for the British Antarctic Survey's scientific research in Antarctica.

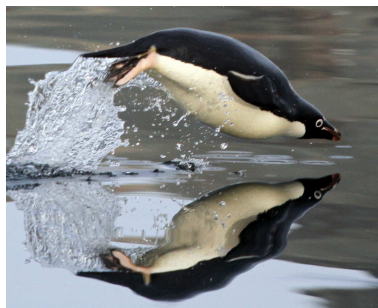

“This is an on-going contract to provide aircraft maintenance support to the British Antarctic Survey's (BAS) fleet of four Twin Otters” explains Mel Cornelius RMA's Director of Maintenance.

Rocky Mountain Aircraft personnel deploy to the BAS operating base in Rothera on the Antarctic peninsula, every October to provide the expertise required to facilitate a very hectic flying season during the brief Antarctic summer. The aircraft along with the deployed AME's are due to arrive back at Rocky Mountain Aircraft's Calgary location in February/March.

Rocky Mountain Aircraft (www.rockymountainaircraft.ca) provides aircraft sales and leasing, avionics and maintenance services and in-house engineering design and approvals to clients worldwide. Rocky delivers field teams to provide customers with maintenance support.

British Antarctic Survey (BAS) is one of the world's leading environmental research centres and is responsible for the UK's national scientific activities in Antarctica. www.antarctica.ac.uk
